
chain $N = 16$
chain $N = 32$
chain $N = 48$
cylinder $4 \times 4$
cylinder $4 \times 6$
cylinder $4 \times 8$
cylinder $4 \times 12$
CNOTs to reach $1 - F$
infidelity $1 - F$
MPS alone (number: $\chi$)
MPS + filter, empirical
MPS + filter, certified
empirical filter cheaper
no MPS with $\chi \leq 64$ reaches it
